

Create new CK repository:	<b>ck add repo:my_new_project</b>
Find CK repository:	<b>ck find repo:my_new_project</b>
List all CK repositories:	<b>ck list repo</b>
Add new module:	<b>ck add my_new_project:module:my_module</b>
Add dummy function to module:	<b>ck add_action my_module -- func=my_func</b>
Test dummy function:	<b>ck my_func my_module --param1=var1 --param2 -param3</b>
Add new entry for this module:	<b>ck add my_new_project:my_module:my_data @@dict</b> Enter {"tags":"cool","data"}
Add new entry for this module:	<b>ck add my_new_project:my_module:my_data2</b>
List my_module entries:	<b>ck list my_module</b>
Find entries by tags:	<b>ck search my_module --tags=cool</b>
Find entry path:	<b>ck find my_module:my_data</b>
Obtain entry info (UIDs):	<b>ck info my_module:my_data</b>
Rename entry:	<b>ck ren my_module:my_data2 :my_data3</b>
Delete entry:	<b>ck rm my_module:my_data3</b>
Pack (archive) repository:	<b>ck zip repo:my_new_project</b>
Import CK zip repository:	<b>ck add repo:my_new_project --zip=my_new_project.zip</b>
Pull existing repo from GitHub:	<b>ck pull repo:ck-autotuning</b>
Update all installed CK repos:	<b>ck pull all</b>
List modules from this repo:	<b>ck list ck-autotuning:module:*</b>
Compile program:	<b>ck compile program:cbench-automotive-susan --speed</b>
Run program:	<b>ck run program:cbench-automotive-susan</b>
Autotune program:	<b>ck autotune program:cbench-automotive-susan</b>
Start CK internal web server:	<b>ck start web</b>
View interactive articles:	<b>ck browser</b>
